Acknowledgements

- I have acknowledged and understood many new concepts after these sessions such as how to use speaking, seeing and listening recognitions to create a project or code .

About Me..

My photograph

My self-introduction:
My name is Brian nasr. I am 11 years old and my passion is football. I like to make creative artwork using different sites and learn new things.

About My Internship with Clevered..

- I do not have any photographs from the session.
Thankyou!
- The experience with clevered till now has been great because of the wonderful help and remarks I am getting whenever I have a problem with my project.
 - Badges Earned:
 - I still have not yet received a badge but I am hoping to receive my next badge soon!

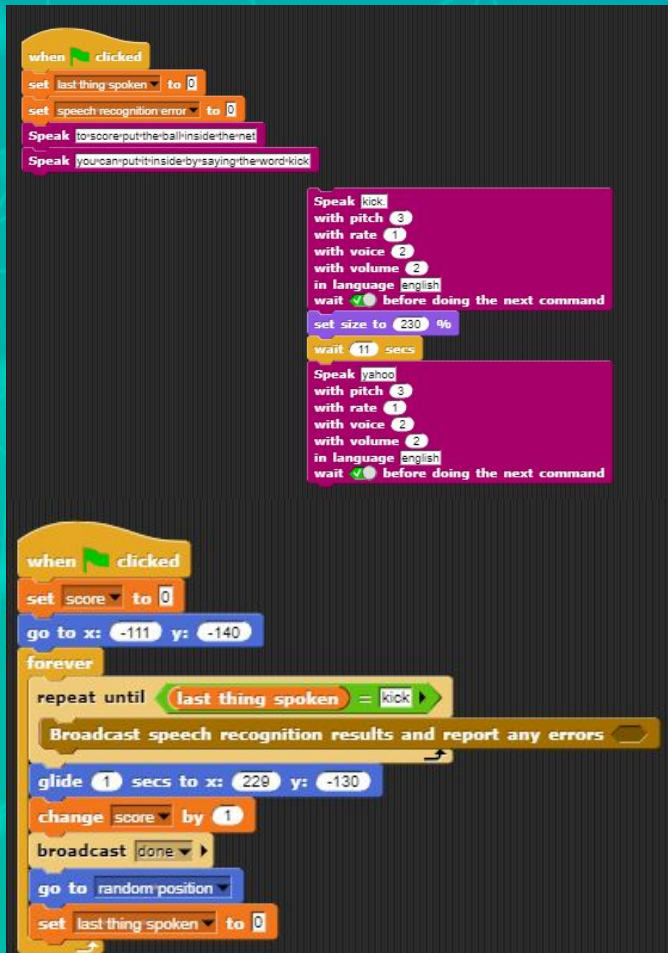

About App (Snap)

I have learned a lot of new concepts about this app which is Snap and how to import listening, seeing and speaking blocks. Moreover, you can add many different sprites with different scripts and a background. I have learned many new things about this app as I am able to create my own football project using listening and speaking blocks.

Speech and Listening recognition

(This will be repeated for each option of the App)

- Screenshot

- I used speech recognition for all of my characters or sprites which are fans that start speaking as a congratulation speech for Devin who is my my main character that kicks the ball into the net. Moreover, I have also used listening recognitions for Devin to kick the ball. When I click the green flag, I have to say “kick” for devin to kick the ball to a random location until he scores the ball into the net and the score increases by 1 point.

Contact Person

- If I have any concerns I will reach out to clevered

Thank you!
